

Designed for Pocket FX

When you need something a little smaller and quieter than a screaming tube amp to play in your hotel room, the PalmGuitar® lets you take full advantage of the latest miniature headphone amps, digital multi-track recorders and other digital pocket effects modules that are on the market. The setup shown in the photo uses a Korg® Pandora® PX4 effects processor, a Samson® Airline AG1 wireless guitar transmitter, and an iRock™ FM output transmitter, that lets you play your PalmGuitar® through any car or home FM radio without any wires or cables to tie you down.

Of course, if you're Phil Campbell, guitarist with the legendary British heavy metal band Motörhead, nothing but a screaming tube amp will get the job done on stage. Either way, with a PalmGuitar®, the choice is yours.

No Risk Test-Drive

The PalmGuitar® is only available direct from our factory. Since you can't try one out at your local guitar store, why not test-drive one in the comfort of your own home? If at anytime during your first 60 days of ownership, you find that the PalmGuitar® isn't simply the coolest guitar you've ever owned, just call us and we'll pay the shipping costs to have you return it to us for a full refund (including your original shipping costs).

Guaranteed for Life

The PalmGuitar® is guaranteed for life to the original owner. Should the instrument ever fail due to any engineering or manufacturing defect, we will either repair or replace it free of charge, including any shipping costs.

Weighs 3 pounds

Engineered Carbon-Fiber Graphite Composite

How can something so small and so dense have such incredible sustain? The elegant, smooth contours of the PalmGuitar® surface conceal an intricate framework of oriented carbon fiber structures on the inside. With the same process they use to make race cars and jet fighters, our proprietary composite architecture joins elements that are designed to provide structural integrity with those that are designed to transmit sonic vibration energy throughout the entire structure.

While the technology may be complex, the purpose is quite simple - with a PalmGuitar®, you can have a precision electric guitar by your side 24/7. Inspiration won't wait until you're ready to act on it ... it just fades away. With a PalmGuitar® ... you're always ready.

- Small/thin/light - fits inside your luggage - no extra baggage
- Durable - survives climate changes without warping, or degrading
- Playable - precise, stable and adjustable, it plays like your favorite guitar
- Big Tone - it looks & feels like solid ebony, with vintage hardwood tone

Platinum

Looking for something special? With a PalmGuitar® Custom, you can design one based on your own specifications. Some common Custom options are:

- Exotic full fingerboard pearl inlay
- Simple or complex pearl inlaid fingerboard markers
- Alternate tuning keys or hardware plating colors
- Removeable pickups, alternate pickups
- Socketed tone capacitors, alternate wiring
- Guitar or 4-String Bass configuration

Our philosophy of blending advanced technology with classic styling is evident in the elegant Custom Platinum 6-String guitar, featuring a flawless full-length mother-of-pearl "Vine of Life" fingerboard inlay, with chrome trim.

The Custom 4-String Bass features a custom Villex™ pickup designed exclusively for the PalmGuitar®, including the incredible Villex™ "passive midrange boost" that lets you shape the precise tone you need for truly thunderous, clear, solid bass response ... no smoke, no mirrors, no rubber strings. If it isn't the coolest bass you've ever played, we'll buy it back from you.

Need some more power at your next board meeting? Try the Custom 17" Tomahawk. This headless micro-6-string is powered by a Duncan® P-90 Stack®... small enough to fit inside an attaché case, yet powerful enough to blow the toupee off the chairman.

To order a Custom, just give us a call or send eMail, and tell us what you want. Once we're sure that your options will fit the tiny PalmGuitar® chassis, we'll send you a firm quotation on the cost and lead-time to produce your instrument.

If economy is more important to you than exotic options, you can even request a quote for a Custom model that eliminates some of the premium features of the Standard Model for a bare-bones economy Custom. For more information, call or eMail us for details.
